

Company Profile – CloudLedger Ltd

1. Organisation Overview

CloudLedger Ltd is a UK-based Software-as-a-Service (SaaS) provider specialising in cloud-based accounting solutions for small and medium-sized businesses. The company enables customers to manage invoicing, payroll, expenses and financial reporting through a web-based platform accessible from any internet-connected device.

CloudLedger Ltd serves over 1,500 business customers across the United Kingdom. As a cloud-first organisation, the company relies heavily on digital systems and third-party service providers to deliver services and support business operations.

This risk assessment has been conducted to identify information security risks affecting CloudLedger Ltd's assets, operations and business objectives.

2. Industry

CloudLedger Ltd operates within the Software-as-a-Service (SaaS) and Financial Technology (FinTech) sectors.

The organisation processes and stores customer financial information, making information security, data protection and service availability critical business requirements. Due to the nature of the data processed, CloudLedger Ltd must maintain appropriate security controls to protect confidential information and comply with applicable legal and regulatory obligations, including UK GDPR.

3. Employees

CloudLedger Ltd employs approximately 50 staff members across the following business functions:

- Executive Management
- Information Technology
- Software Development
- Sales and Marketing
- Customer Support
- Human Resources
- Finance

The organisation operates a remote-first working model, with employees primarily working from home using company-issued laptops and cloud-based collaboration tools.

4. Technology Environment

The organisation's technology environment includes:

Core Systems

- Microsoft 365 (Email, Teams, SharePoint and OneDrive)
- Microsoft Azure cloud hosting platform
- Customer Relationship Management (CRM) system
- Cloud-based payroll solution
- Customer support platform
- Source code repository
- Corporate website

Infrastructure

- Azure-hosted production environment
- Backup and recovery systems
- Employee laptops
- Multi-factor authentication solution
- Network and security monitoring tools

Information Assets

- Customer financial records
- Personal data
- Employee records
- Payroll information
- Security policies and procedures
- Application source code

5. Business Objectives

CloudLedger Ltd has identified the following key business objectives:

BO1 – Protect Customer Data

Maintain the confidentiality, integrity and availability of customer information and financial records.

BO2 – Maintain Service Availability

Ensure customers can reliably access the accounting platform with minimal disruption.

BO3 – Meet Regulatory Requirements

Comply with applicable legal, contractual and regulatory obligations, including UK GDPR.

BO4 – Maintain Customer Trust

Protect the organisation's reputation by preventing security incidents and data breaches.

BO5 – Support Sustainable Growth

Provide secure and scalable services that support continued business growth and customer acquisition.

6. Assessment Scope

The assessment covers:

- Information assets
- Cloud infrastructure
- Employee devices
- Third-party service providers
- Customer information
- Security governance processes
- Business-critical applications

The assessment excludes:

- Physical security controls at third-party data centres
- Detailed penetration testing activities
- Financial and non-cyber operational risks

Risks have been assessed using a qualitative methodology based on likelihood and impact ratings. Risk treatment recommendations have been developed to support the organisation's security objectives and reduce overall risk exposure.

7. Conclusion

As a growing SaaS organisation handling sensitive customer information, CloudLedger Ltd faces a variety of cybersecurity risks that could affect business operations, regulatory compliance and customer trust. This assessment aims to identify and evaluate those risks, allowing management to make informed decisions regarding risk treatment and security improvements.
